

DHCP - task 4

IP addresses can be assigned either manually, by entering them physically into a device, or automatically and most commonly by using DHCP (Dynamic Host Configuration Protocol) server.

- 1) If it is not assigned manually an IP address, it sends out a request (DHCP Discover) to see if any DHCP servers on the network. The DHCP server replies back with an IP Address the device could use (DHCP offer). The device then sends a reply confirming it wants offered IP Address (DHCP Request). Then lastly, the DHCP server sends a reply acknowledging this has been completed, and the device can start using the IP Address (DHCP Ack).

Quiz:-

1) What type of DHCP packet is used by a device to retrieve an IP address?

A) DHCP Discover

2) What type of DHCP packet does a device send once it has been offered

an IP address by the DHCP server?

A) DHCP Request

3) Finally, what is the last DHCP packet that is sent to a device from a DHCP server?

A) DHCP ACK

Note := Remember DORA (Discover, Offer, Request, ACK (Acknowledgment)).
